Preface

This document highlights the achievements and scope of work of the members of the Network of Tropical Fisheries Scientists (NTFS) over the past 9 years, as published in *Fishbyte*, whose final issue as an independent newsletter is dated December 1991. In 1983, the *Fishbyte* mailing list comprised 60 names; now, that list includes 1,150 individual member scientists and the libraries of 200 research institutions.

This document is divided into six sections of which 4 are indices (Author, News, Geographic and Species), the other two being a "List of *Fishbyte* articles, 1983-1991" [with errata] and the distribution of NTFS members as of 1 June 1992, by country (see also cover design). The Author index lists all authors of articles published in *Fishbyte* or included in the section featuring "Recent Publications of NTFS Members". The News index includes names of Network members whose activities were featured in the *News Section* or whose "Letter to the Editor" were published. The Species index includes scientific names, common names in English, and local names of fish and other aquatic resources featured in *Fishbyte* articles and publications listed in the section on "Recent Publications of NTFS Members". Cross referencing in the species index followed these norms: i) see was used to reference an entry that is synonymous to a main entry; ii) see also was used to refer to additional references or related entries. The Geographic index refers to countries and localities therein. The following norms were followed for geographic indexing:

i) English translations are provided for foreign names except in cases where the foreign names are widely used, i.e., Rio de Janeiro. A direct translation of a term mentioned once, e.g. [(Indochine) (Indochina)] follows the foreign name; however, if both the English and foreign translations appear in separate instances, the entry that follows is (also), i.e., Mar Tirreno (also Tyrrhenian Sea). The entries for both translations are entered only once, whichever occurs first.

ii) Sites which straddle more than one country are identified as such, wherever possible, i.e., Lake Kivu (Zaire/Rwanda); for lack of information, some sites are given without country.

iii) Cross references to countries, e.g., "Aby Lagoon (Côte d'Ivoire)" are indicated by brackets rather than "see"; also cross references are provided to countries even if they were not cited in *Fishbyte*.

Each entry refers to a particular issue and page of *Fishbyte*, represented by a four-digit number consisting of the issue and volume number (first two digits) and the page number (last two digits). Thus, number 2306 refers to *Fishbyte* Vol. 2(3) and page number six. Cross references are provided in the Species and Geographic index.

So all that is left now is to thank all concerned with *Fishbyte*, notably Founding Editor, Dr. J.L. Munro, Ms. Dina Santos, his Network Secretary, Mr. Siebren Venema, Project Manager of the FAO/DANIDA Fish Stock Assessment Project, for his steady support of *Fishbyte* and the NTFS, NORAD for their financial contribution to the NTFS (1987-1989), the UNESCO and other organizations who provided publications for distribution through the NTFS, and last but not least, you dear readers and Network members, for your continued interest in *Fishbyte* and the NTFS.
